POLYA MRNA was purified from each sample, pooled and cDNA synthesized. The cDNA was directionally cloned into lambda ZAP II (Stratagene) in the BCORI (5') and XhOI (3') sites. Paluescript II SK plasmids were excised from the lambda ZAP clones by superinfection with Exassist (Stratagene) phage. The library was normalized using method 4 described in Bonaldo et al (1996) Genome Research 6: 791-806."

Quality coverage: 6.27 in 020 bases; sum-of-contigs estimation.
*NOTE: This is a 'working draft' sequence. It currently
*consists of 7 contigs daps between the contigs
*are represented as runs of N. The order of the pieces
*is believed to be correct as given, however the sizes
*of the gaps between them are based on estimates that have
*provided by the submittor.

*This sequence will be replaced
*by the finished sequence as soon as it is available and
*the accession number will be preserved.

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                   Score
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     N_Geneseq_032802:*

Translated amino acid sequences of this region are provided in AAW08146-49. The CHD-1A (see also AAT42751) and CHD-W (see also AAT42754-55) genes determine sex in birds and can be used to identify the sex of an embryo, foetus etc. and to manipulate the sex of progeny.

The sequence of CDH-1A was deduced from 3 clones isolated from a stage 10-12 chicken embryo cDNA library using a great tit CHD-W sequence (see also AAT42755) as probe. The CHD-1A (A = Avian) gene shows close identity to the mouse CHD-1 gene (see also AAT42756-57). It is located on an autosome or z chromosome. Probes based on CHD-W and CHD-1A give a W chromosome-specific signal on hybridisation to genomic DNA of a non-rarite bird and can be used for sex determin. of a bird. CHD-1A nucleic acids can also be used to control the sex of the progeny of a bird.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          4160 taaagaccttgcaagaaaggaagcacaaaggcttgctggtgca 4202

                                                                                                                                                                                                                                                                                                                                                                                      The chicken CHD-W gene (AAT42754) acting alone or in conjunction with the closely related CHD-1A gene (AAT42751) is suggested to initiate female development in birds. The sequence of CDH-W was deduced from 2 clones isolated from a 10-day chick embryo library using a fragment of the CHD-1A gene as a probe. The CHD-W gene is located on the W chromosome. Probes based on CHD-W and CHD-1A give a W chromosome-specific signal on hybridisation to genomic DNA of a non-rarite bird and can be used for sex determin. of a bird. CHD-W nucleic acids can also be used to control the sex of progeny of a trade
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Bases 3855-3977 (AAT42756) of the mouse CHD-1 gene show homology to portions of the chicken CHD-1A (A = Avian) gene (AAT42757), chicken CHD-W (W refers to the W chromosome) gene (AAT42758) and and the great tit CHD-W gene (AAT42759). Translated amino acid sequences of this region are provided in Maral 146-49. The CHD-1A (see also AAT42751) and CHD-W (see also AAT40754-55) genes determine sex in birds and can be used to identify the sex of an embryo, for the characteristic sex of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Avian chromodomain-helicase-DNA binding genes determine sex in birds - used for sex determn. and to control sex of progeny
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Chicken CHD-W gene (partial sequence).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              06-JUN-1995;

Translated amino acid sequences of this region are provided in AAW08146-49. The CHD-IA (see also AAT42751) and CHD-W (see also AAT42754-55) genes determine sex in birds and can be used to identify the sex of an embryo, foetus etc. and to manipulate the sex of progeny.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 telomere repeat binding factor (TRF) dimerisation domain, and forms a hetero-dimer with TRF, preventing it from binding to the specified repeat sequence. A-TRF, optionally expressed by gene therapy, is used to inhibit shortening of telomeres associated with ageing (for cosmetic purposes) and disease, e.g. ataxia telangeictasia, Down's syndrome, atrophy of the skin, age-related macular degeneration, atherosclerosis, tumours and viral (including human immune deficiency virus) infection. Cells expressing A-TRF also have an increased life span in vitro, e.g. for expression of recombinant proteins or where intended for subsequent transpared to the statement of the s
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Nucleic acid encoding altered telomere repeat binding protein and related vectors - transformants, heteror-dimers and antibodies, used to inhibit shortening of telomerases caused by ageing or disease, also used to extend life of cells in culture

The polypopulations and polypopulations are useful in gene therapy, vaccines or peptide therapy. The polypopulates have various cytokine-like activities, e.g. stem cell growth factor activity, haematopolesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and

CC associated proteins (I) and the nucleic acids (NAs) that encode them.
CC (I) have cytostatic activity and can be used in gene therapy, antisense
CC inhibition and in vaccines. The NAs and the lung tumour-associated
CC proteins they encode may be used in the prevention, treatment and
CC diagnosis of diseases associated with their inappropriate expression,
CC especially lung cancers. For example, the NAs may be administered to
CC treat diseases by rectifying mutations or deletions in a patient's genome
CC triat affect the activity of the protein by expressing inactive proteins
CC or to supplement the patients own production of (I). Additionally, the
CC NAs may be used to produce the lung-tumour associated protein, according
CC molecules may be administered to down regulate protein expression by
CC binding with the cells own genes and preventing their expression. The NA
CC and complementary sequences may also be used as NAA probes in diagnostic
CC assays to detect and quantitate the presence of similar NA sequences in
CC cancer. The (I) may be used as antigens in the production of antibodies
CC and in assays to identify modulators (agonists and antagonists) of the

CBFBBA01 polynucleotide (1), vectors containing (1) and recombinant host cells are useful for recombinant production of CBFBBA01. Both (1), CBFBBA01 and antibodies against CBFBBA01 are useful as research reagents, for screening assays and in diagnostic assays, especially for cancer, autoimmune disease, diabetes mellitus and multiple sclerosis. Antagonists and agonists of CBFBBA01 can be used to inhibit or enhance, respectively, the activity of CBFBBA01 or expression of (1). Anti-CBFBBA01 antibodies and CBFBBA01 or its fragments can be used in vaccines.
                         The present sequence represents an oncogene from the present invention. The present invention describes a composition which comprises two antisense oligonucleotides. The first oligonucleotide is specific for cytoplasmic oncogene or proto-oncogene selected from ras, raf, EGF-1, c-fms, C-ros, C-kit, c-met, C-trk, c-src, C-bbl, bor-abl, c-fgr and c-fms, C-ros, C-kit, c-met, C-trk, c-src, C-bbl, bor-abl, c-fgr and c-fms, C-ros, C-kit, c-met, C-trk, c-src, C-bbl, bor-abl, C-fgr and c-fms, C-ros, C-kit, c-met, C-trk, c-src, C-bbl, bor-abl, C-fgr and c-fms, C-ros, C-kit, c-met, C-trk, c-src, C-bbl, bor-abl, C-fgr and c-fms, C-ros, C-kit, c-met, C-trk, c-src, C-bbl, bor-abl, C-fgr and c-fms, C-ros, C-kit, c-met, C-trk, c-src, C-bbl, bor-abl, C-fgr and C-fms, C-ros, C-kit, C-met, C-trk, c-src, C-bbl, bor-abl, C-fgr and C-fms, C-ros, C-kit, C-met, C-trk, C-src, C-bbl, bor-abl, C-fgr and C-fms, C-ros, C-kit, C-met, C-trk, C-src, C-bbl, bor-abl, C-fgr and C-fms, C-ros, C-kit, C-met, C-trk, C-src, C-bbl, bor-abl, C-fgr and C-fms, C-ros, C-kit, C-met, C-trk, C-src, C-bbl, bor-abl, C-fgr and C-fms, 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence encodes CBFBBA01, which is a protein homologous to murine vesicle trafficking protein sec22b. CBFBBA01 is a cytoplasmically orientated integral membrane protein, located in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI; 1999-312961/26.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    21570 ACAAGAAACCCCAGGCAA 21553
                                                                                                                                                                                                                                        The invention relates to a mammalian PG1 gene and protein, and a set of PG1 biallelic markers. The PG1 polynucleoride and biallelic markers are used in a hybridisation assay, a sequencing assay, or in an allele-specific amplification assay for determining the identity of a nucleotide at a PG1-related biallelic marker. The methods can be used to detect and to assess the risk of developing cancer or prostate cancer. Barly-stage diagnosis of prostate cancer relies on prostate specific antigen (PSA) dosage. However, the effectiveness of this is limited due to its inability to discriminate between malignant and non-malignant affections of the organ. A need exists for both a reliable diagnostic procedure which would enable early-stage diagnosis, and for preventative and curative treatments of the disease. The PG1 gene can be used for detection of prostate cancer, and the risk of developing it in the future, and can also be used to determine therapies for the disease.
                                                                                                                                                                                                                 Sequence 19 BP; 9 A; 6 C; 3 G; 1 T; 0 other;

                                                                                             ρ
                                                                                                                                                                                                                        The invention relates to a mammalian PG1 gene and protein, and a set of PG1 biallelic markers. The PG1 polynucleotide and biallelic markers are used in a hybridisation assay, a sequencing assay, or in an allele-specific amplification assay for determining the identity of a nucleotide at a PG1-related biallelic marker. The methods can be used to detect and to assess the risk of developing cancer or prostate cancer. Early-stage diagnosis of prostate cancer relles on prostate specific antigen (PSA) dosage. However, the effectiveness of this is limited due to its inability to discriminate between malignant and non-malignant affections of the organ. A need exists for both a reliable diagnostic procedure which would enable early-stage diagnosis, and for preventative and curative treatments of the disease. The PG1 gene can be used for detection of prostate cancer, and the risk of developing it in the future, and can also be used to determine therapies for the disease.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Score

/note="vector: pBluescript SK(+) vector DNA, phagemid excised from lambda ZAP; Site_1: EcoR V; Site_2: EcoR V;
Host leukocytes were extracted from P. vivax infected blood using the following methods: first, infected blood was activated by the addition of 0.5 ml of ADP (40mg/ml) per 10 ml blood. Then blood was passed over a column of acid washed 0.1 mm glass beads, then through a Plasmodipur filter, followed by passage through a column of pre-wet Whatman CF11 powder (1:2 ratio volume of blood to CF11), and finally centrifuged through a 50% percoll density cushion. Purified DNA was digested with mung bean nuclease in the presence of 44% formamide at 50cC as described (Vernick, K.D., Imberski, R.B., and McCutchan, T.F. 1988. Nucleic Acids Research 16:6883-6896). Digested DNA was blunt-ended using T4 DNA Polymerase and size fractionated over a Sepharose CL-2B column. Fractions in the size range 500bp-4kb were ligated into the Eco RV site of pBluescript SK(+), and E. coli XL-10 Gold transformed with the
